

Naziv: Združenje mladih, staršev in otrok Sezam
Naslov: Novi trg 1
Poštna številka in kraj: 1000 Ljubljana
Kontaktna oseba: Bor Kirn
Telefon in faks: 01/25-11-218, 01/25-11-219
E- pošta: info@zdruzenje-sezam.si
Spletna stran: www.zdruzenje-sezam.si

Številka pogodbe o sofinanciranju: 354-769/2012-71

VSEBINSKO POROČILO

1. Projekt »Od besed k dejanjem 2013« (From words to deeds 2013)
2. Projekt Od besed k dejanjem 2013 smo začeli organizacijsko in pripravljeno izvajati marca letos. Samo terensko delo pa smo začeli v začetku aprila, ko se nam je pridružila prva skupina dijakov Biotehniškega izobraževalnega centra. S skupinami dijakov BICa smo opravljali terensko delo še v mesecu maju in mesecu juniju, hkrati pa smo za njih organizirali predavanje o invazivnih tujerodnih rastlinah. Predavanje smo realizirali v Botaničnem vrtu. Imeli smo predavanja za starejše občane v ribiških društvih Dolomiti in Barje.

Letošnja zima je bila tako dolga, da so vse rastline, vključno z invazivnimi rastlinskimi vrstami začele poganjati precej kasneje. Japonski dresnik se je tako začel pojavljati šele okoli 5-10 aprila. Takrat smo naša rastišča v Župančičevi jami in na Koseškem bajerju prekopali, izpulili korenine ter jih odpeljali na sežig. Na koseškem bajerju so nam bili v pomoč tudi ribiči iz RD Dolomiti. Nato smo oba rastišča prekrili s folijo ter jih spremljali ter ob potrebi čistili vse do sedaj. A monitoring bomo izvajali vse do začetka nizkih temperatur, ko Japonski dresnik zaradi nizkih temperatur na površju odmre. V Župančičevi jami je bilo letos zelo malo poganjkov. Obseg prekrivanja je precej manjši kot prejšnje leto, drugih rastlin je precej več, tako da postopek kaže svoj učinek in si bo rastišče počasi opomoglo. Na Koseškem bajerju, kjer prekrivamo prvič, je bilo zaradi tega seveda tudi precej več dela na sami lokaciji, vendar tudi tam opažamo, da Japonskemu dresniku peša njegova moč. Tam smo prisotni vsaj enkrat na deset dni in lokacijo sproti očistimo poganjkov. Problem Koseškega bajerja je tudi v tem, da je naša lokacija izjemno izpostavljena vetru, tako da smo imeli kar nekaj problemov, kako folijo pritrditi, a nam je na koncu to zelo dobro uspelo. Na obeh lokacijah smo se veliko pogovarjali z mimoidočimi o našem projektu; nekajkrat smo dobili tudi nekaj osvežilnih pijač od prijaznih lokalcev.

Ambrozijo smo pulili na dveh lokacijah. Prva lokacija je bila na hišnem dvorišču Novega trga 1, kjer smo enkrat skupinsko popolnoma populili vse rastline. Kasneje smo skozi postopek nadzora odstranili še preostanke Ambrozije. Druga lokacija, kjer smo odstranjevali ambrozijo je bila pri trgovini Hofer v Stegnah. Tam smo izvedli obsežnejšo akcijo v hudi pripeki, a je bila

nujna, ker se je Ambrozija že zelo razrasla in je bila tik pred cvetenjem. Na našem predvidenem rastišču v Argentinskem parku smo večkrat izvajali monitoring, a smo po vsej verjetnosti z akcijo prejšnje leto Ambrozijo na območju Argentinskega parka izkoreninili.

Izdelali smo tudi krajši strip na temo Ambrozije.

The project from words to deeds 2013 started in April 2013. We started the project a little later than expected because of the long winter and a bit too soon because there were no plants out yet. But we got the first practice students team from BIC and we had to start. We had another two practice students teams one in May and one in June to work on our project and we expect another in October. Besides working on this project, we had taken them to Botanical gardens, where we showed them most of the invasive plant species that exist in Slovenia and educated them on this topic. We also held a course on invasive plant species for elderly citizens at local fishing organizations RD Dolomiti and RD Barje.

As I said, because of the long winter plants including the invasive species didn't start growing above the ground until the 5th or the 10th of April. On our two locations on Koseze lake and in Župančičeva jama we dugged out a lot of Japanese knotweed roots and took them to the torch. At Koseze lake we also got some help from local fishermen from RD Dolomiti. We covered both locations with a soil. We then monitored them and still do until the winter comes. We also had to clean up the Japanese knotweed from the locations when needed. This year there was very little Japanese knotweed on our location in Župančičeva jama. The covered area was much smaller here than last year, there are a lot of other plants growing in the area now and for now it looks like the soil is going to heal from the Japanese knotweed. On Koseze lake, where we started covering the area this year, there is expectedly much more Japanese knotweed still growing, even though it is covered. But the strength is already weakening. We come to the location to monitor at least once in 10 days or once a week, where we clean up the location each time. The problem with Koseze lake is that it's located at a very windy place, so we had quite a few problems restraining the foil cover so not to get blown away. But eventually we did it. We talked to a lot of people on both locations about the project; we even got a few refreshments here and there from the locals.

We also removed Ambrosia on two locations. One was the location in an inner courtyard of Novi trg 1, where we removed all of the Ambrosia plants. Later we monitored the location and here and there removed a plant or two. The second location was at the new Hofer market in Stegne. We organized an action on a larger scale there on a very hot day. But it was urgent that we did this, because Ambrosia had already spread a lot and it was about to blossom. Also we had one location set to remove Ambrosia, one where we had to remove it last year, at Argentinski park. We monitored the place and didn't find one Ambrosia plant, so last year's action was a great success.

We have also drawn a small comic book concerning Ambrosia.

3. Izobraževanje, tujerodne rastlinske vrste, Župančičeva jama, Koseški bajer, Japonski dresnik, Ambrozija, Argentinski park, strip

Education, invasive plant species, Župančičeva jama, Koseze lake, Japanese knotweed, Ambrosia, Argentinski park, comic

4.

- a) Nadaljevanje metod prekrivanja Japonskega dresnika na lokaciji Župančičeva jama.
- b) Prekritje rastišča japonskega dresnika na novi lokaciji na Koseškem bajerju.
- c) Odstranjevanje in čiščenje novega rastišča na Koseškem bajerju kot priprava za prekrivanje rastišča v naslednjem letu.
- č) Puljenje Ambrozije na notranjem dvorišču Novi trg 1 in pri novem Hoferju v Stegnah.
- d) Monitoring rastišč Ambrozije na zgornjih lokacijah in v Argentinskem parku.
- e) Monitoring rastišč japonskega dresnika.
- f) Obisk Botaničnega vrta in predavanja v Botaničnem vrtu.
- g) Obveščanje javnosti preko bloga in Facebooka.
- h) Izdelava kratkega stripa.
- i) Delo z mladimi praktikanti.
- j) Delo z nevladnimi organizacijami v lokalnih skupnostih.
- k) Predavanja za starejše občane pri RD Dolomiti in RD Barje
- l) Intervju za Slovensko kroniko na TV SLO 25.9.2013
- m) Objava v tiskanem mediju v Delu 10.5.2013
- n) Objava na internetni strani Zelena prestolnica - Ljubljana

5. Partnerji:

- RD Dolomiti
- Biotehniški izobraževalni center
- Biologinja Cilka Krečič
- Prostovoljci iz Zavoda Bob
- MSV (mladinsko središče Vič)
- Četrtna skupnost Dravlje
